

ACHYUTH KP

Senior Software Engineer | Java | Spring Boot | Kafka | Payments and Cards

Phone: +91 6360094425 | **Email:** kpachyuthz@gmail.com | **Location:** Bengaluru, Karnataka, India

LinkedIn: linkedin.com/in/kpachyuth | **GitHub:** github.com/achyuthkp27

PROFESSIONAL SUMMARY

Backend engineer with 5+ years building card, payment, and authentication systems across Retail Internet Banking, Corporate Internet Banking, and Mobile Banking for First Citizens Bank. Primary owner of four production features: Card on File tokenization for Visa and Mastercard, virtual cards and the first Google Pay launch in Trinidad and Tobago, Montran payment integration, and an LLM banking assistant on Spring AI and Azure OpenAI. Promoted to Senior Software Engineer at FIS Global.

TECHNICAL SKILLS

- **Languages & Frameworks:** Java (8 to 21), SQL, JavaScript, Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate, Spring AI, gRPC, React Js
- **Core Java:** Multithreading and Concurrency, Collections, OOP, Design Patterns, Data Structures and Algorithms
- **Architecture, Data & Messaging:** Microservices, REST APIs, Event-Driven Architecture, Apache Kafka, PostgreSQL, Redis, Object Storage (MinIO, S3-compatible), Distributed Locking, Idempotency, Circuit Breaker, Retry Patterns
- **Payments, Security & AI:** Visa and Mastercard Network Tokenization, Apple Pay and Google Pay Provisioning, OAuth2, JWT, JWE, JWS, TOTP / MFA, Azure OpenAI
- **DevOps, Testing & Observability:** Docker, Kubernetes, AWS (EC2, S3, RDS, ELB, IAM, CloudWatch), Jenkins, GitHub Actions, Maven, Git, ELK Stack (Elasticsearch, Logstash, Kibana), Prometheus, Grafana, Checkmarx, JUnit, Mockito, Swagger / OpenAPI

PROFESSIONAL EXPERIENCE

Cognizant Technology Solutions

Bengaluru, India

Software Engineer (rebadged from FIS Global, same role and team) | Client: First Citizens Bank

Apr 2026 to Present

- Own Card on File, virtual cards, and the LLM banking assistant on the bank's next-generation Java 21, Spring Boot 3.5, and Kafka platform, shipping enhancements across Retail Internet Banking, Corporate Internet Banking, and Mobile Banking.
- Extend virtual card wallet provisioning from Google Pay to Apple Pay, now in rollout.
- Lead features from requirements and technical design to production rollout, defining solutions and estimating scope with product owners, project managers, and partner teams.
- Mentor 4 junior engineers and review their code for quality and security within a 25+ engineer delivery team.

FIS Global

Bengaluru, India

Senior Software Engineer (promoted from Software Engineer) | Client: First Citizens Bank

Jul 2021 to Apr 2026

- Designed, developed, and maintained 30+ Spring Boot microservices powering Retail Internet Banking, Corporate Internet Banking, and Mobile Banking for retail customers and hundreds of corporate clients, and delivered three major corporate banking modules.
- Primary owner of Card on File network tokenization for Visa and Mastercard, designing and building the issuer-side services that handle network provisioning and lifecycle calls, and taking them to production in 3 months.
- Primary backend owner of in-app virtual cards with secure card number and CVV reveal and wallet provisioning, built in 3 months of a 6-month program with UI and vendor teams, powering the first Google Pay launch in Trinidad and Tobago.
- Designed and launched a production LLM banking assistant on Spring AI and Azure OpenAI that answers customer FAQs and handles account lookup and identity validation before password resets, resolving routine requests without a support agent.
- Owned the P2P and merchant payment integration with the Montran payments platform, live in production in 1 month.
- Fixed a race condition that sent duplicate SMS, email, and push alerts via Infobip when scheduler instances picked up the same records, adding scheduler locking, row-level fetch locks, claim-and-deliver status updates, and idempotent sends, which ended duplicate vendor charges and customer reports of double debits.
- Designed a single set of APIs serving both Trinidad and Tobago and Barbados, resolving the region from the access token and routing each request to that region's database.
- Joined as a React engineer on the bank's back-office portal and Internet Banking app, then moved to backend to build gRPC services on NATS JetStream, MinIO (customer media and downloadable back-office and customer reports), and Redis.
- Built RFC 6238 TOTP MFA with AES-256-GCM secret storage and Redis replay protection, maker-checker dual approval on financial transactions, and JWT, JWE, and JWS security across banking APIs.
- Built Kafka integrations with retry and circuit breaker patterns, tuned Redis caching and PostgreSQL queries, set up ELK logging, and covered services with JUnit and Mockito tests.
- Became the go-to engineer for Retail Internet Banking, shaping its API contracts and technical designs with the client architects.

EDUCATION & AWARDS

- **B.E. in Computer Science and Engineering**, Sri Siddhartha Institute of Technology, Tumakuru *Jul 2017 to Jul 2021*
- **Above and Beyond Individual Award**, FIS Global (Q1 2024), for outstanding performance on critical delivery.
